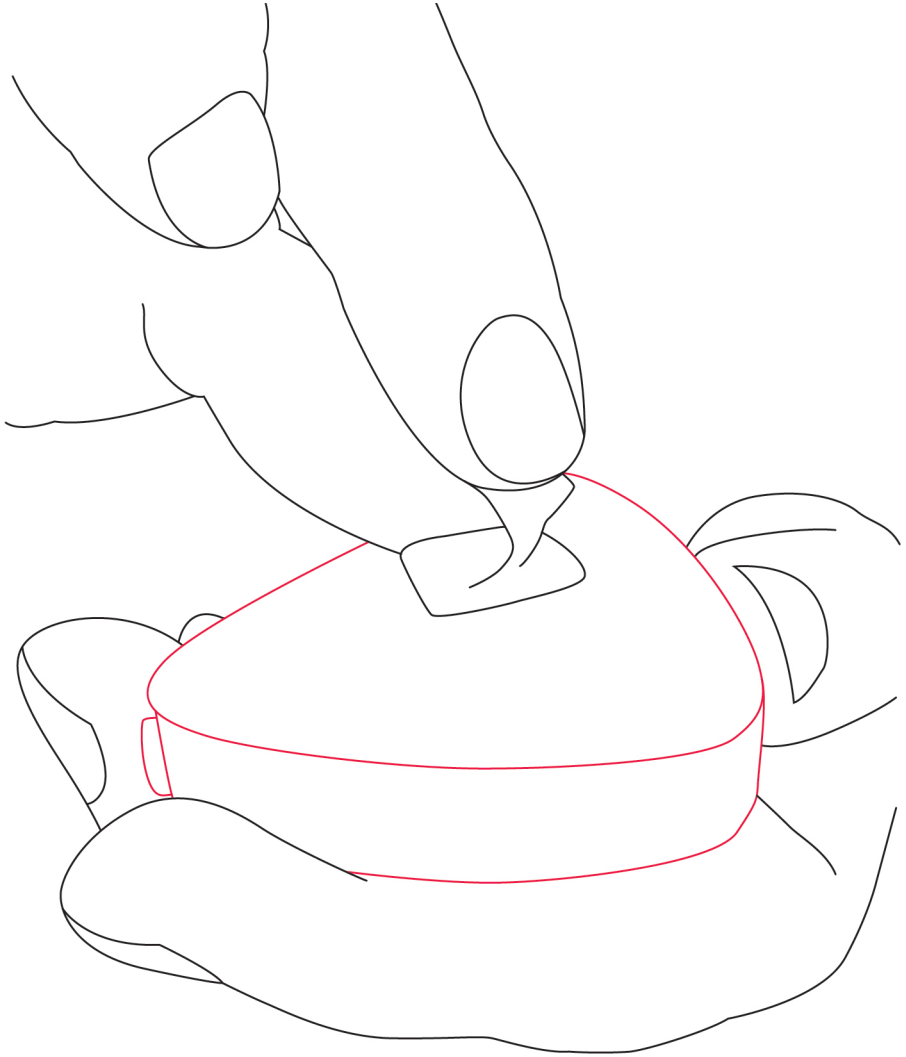
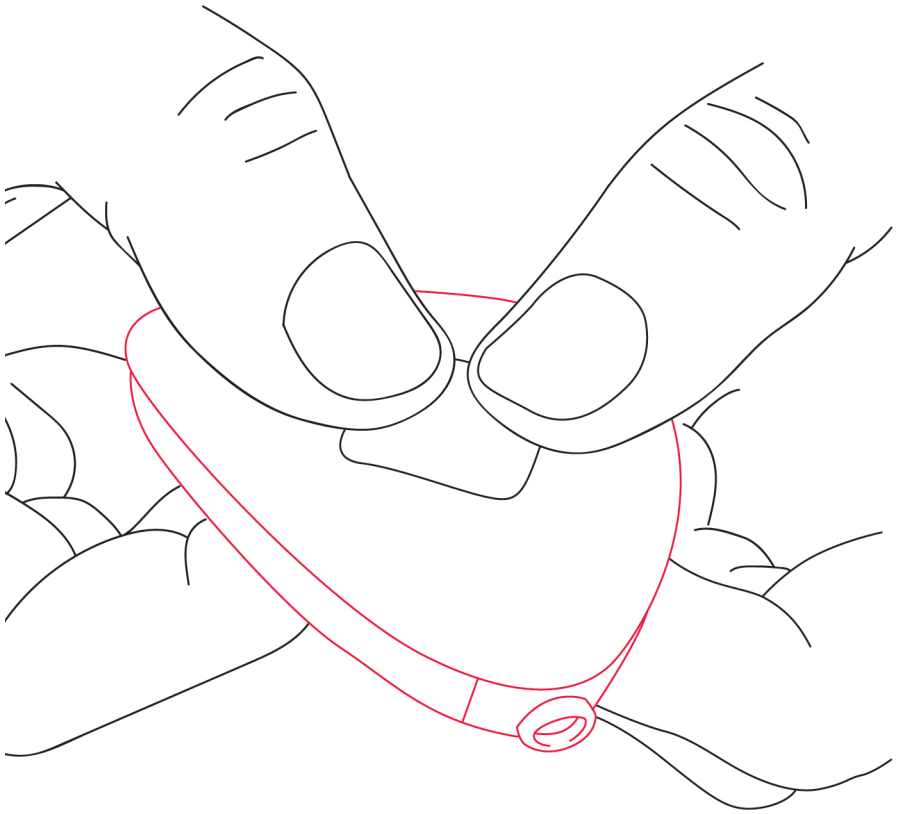
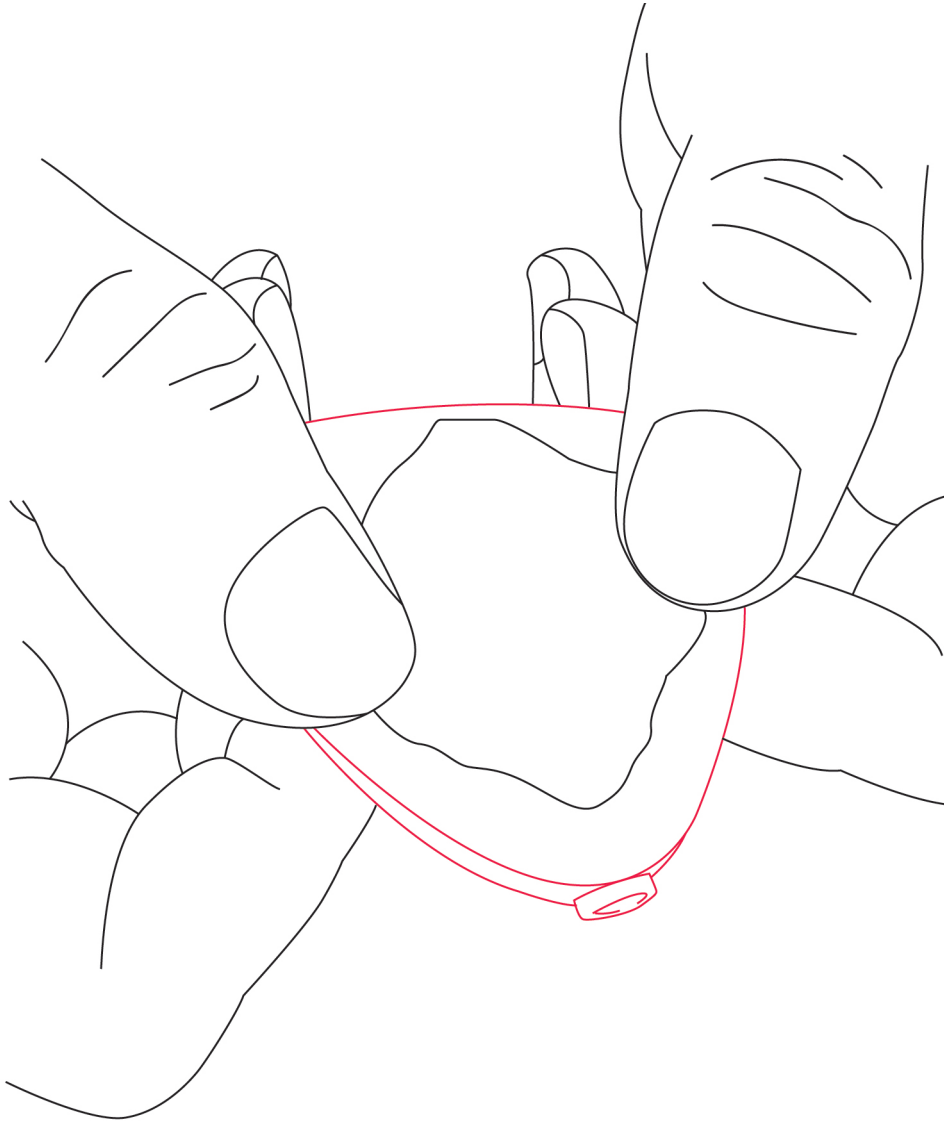
Unbox and prepare the pickup and all the included parts.



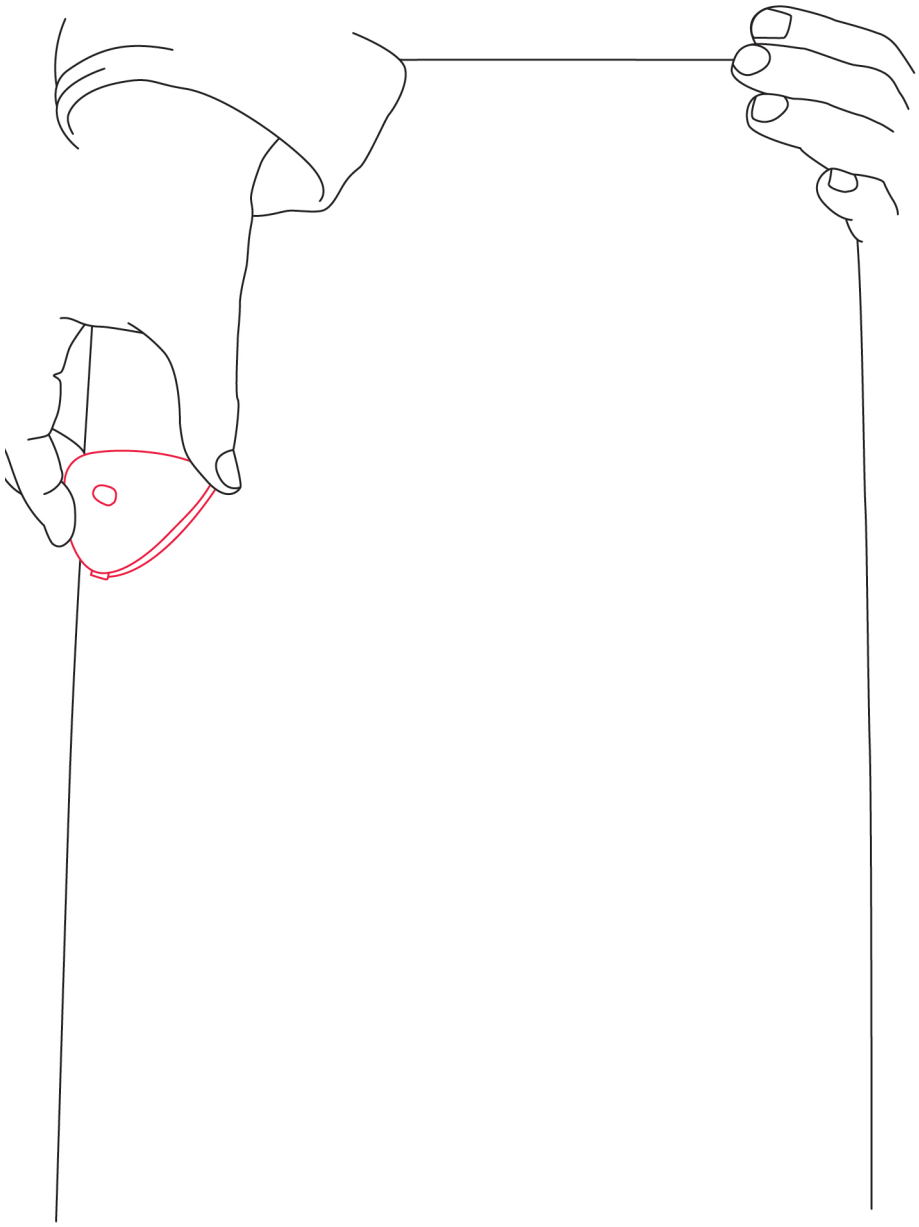
Before sticking the pickup, try it at different spots on your instrument. For that purpose, peel off the protective layer of the Power Tack adhesive. Place it in the middle of the pickup's underside.



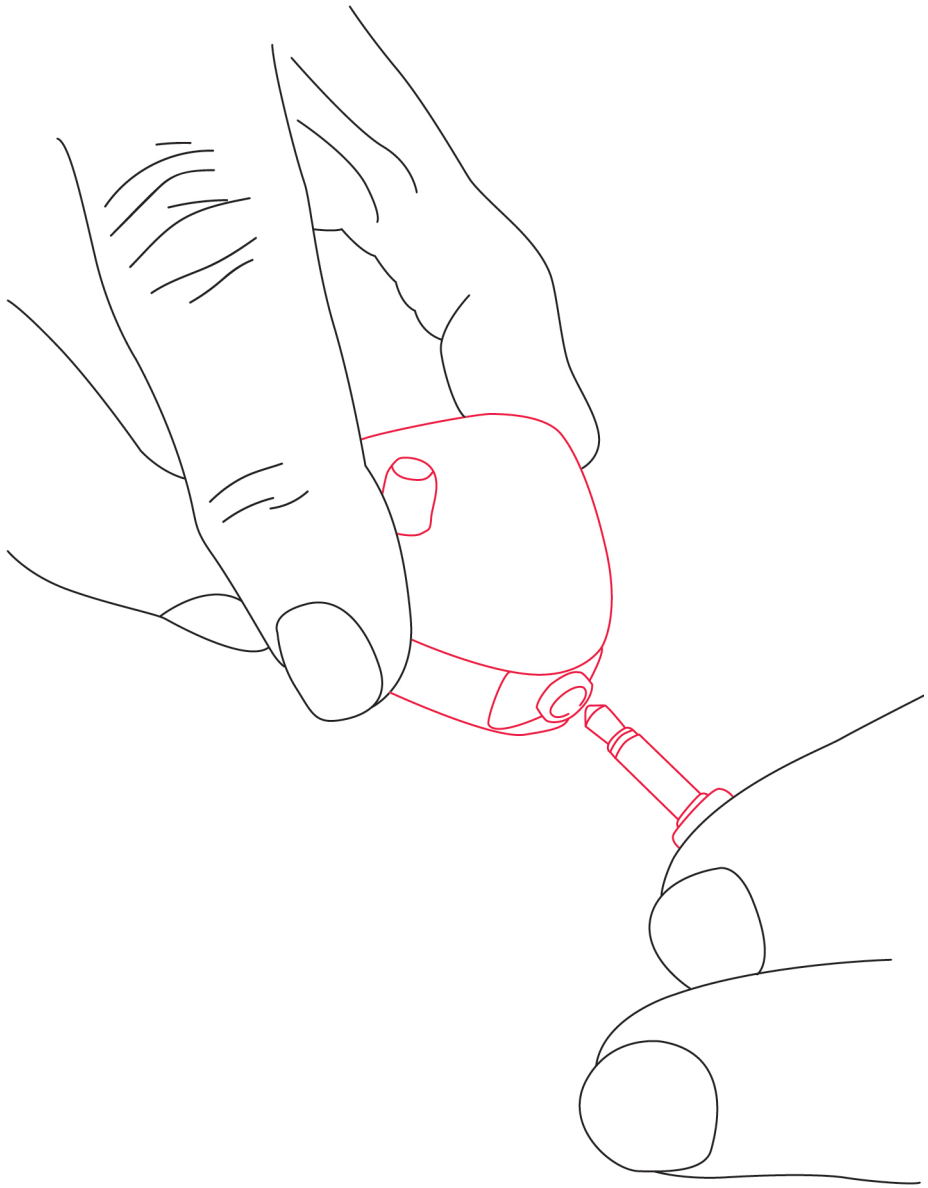
Stretch the Power Tack and apply little pressure on it in order to stick firmly to the wooden surface.



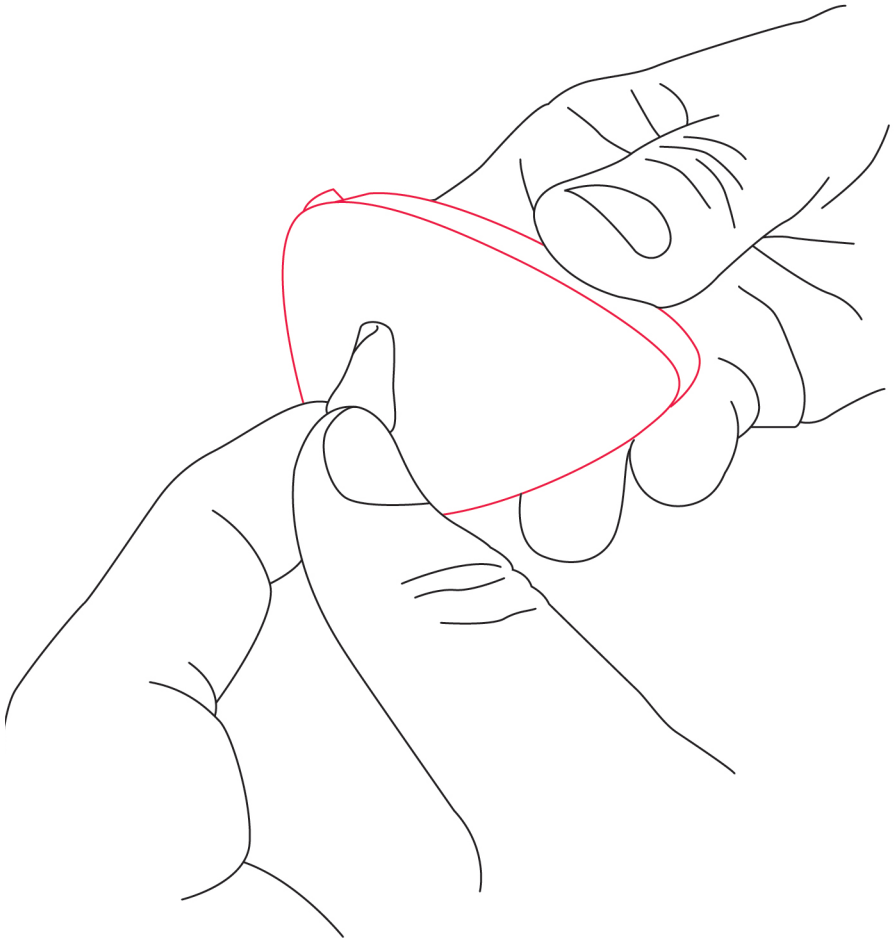
We recommend stretching the Power Tack on a largest possible surface and made on thinnest possible layer.



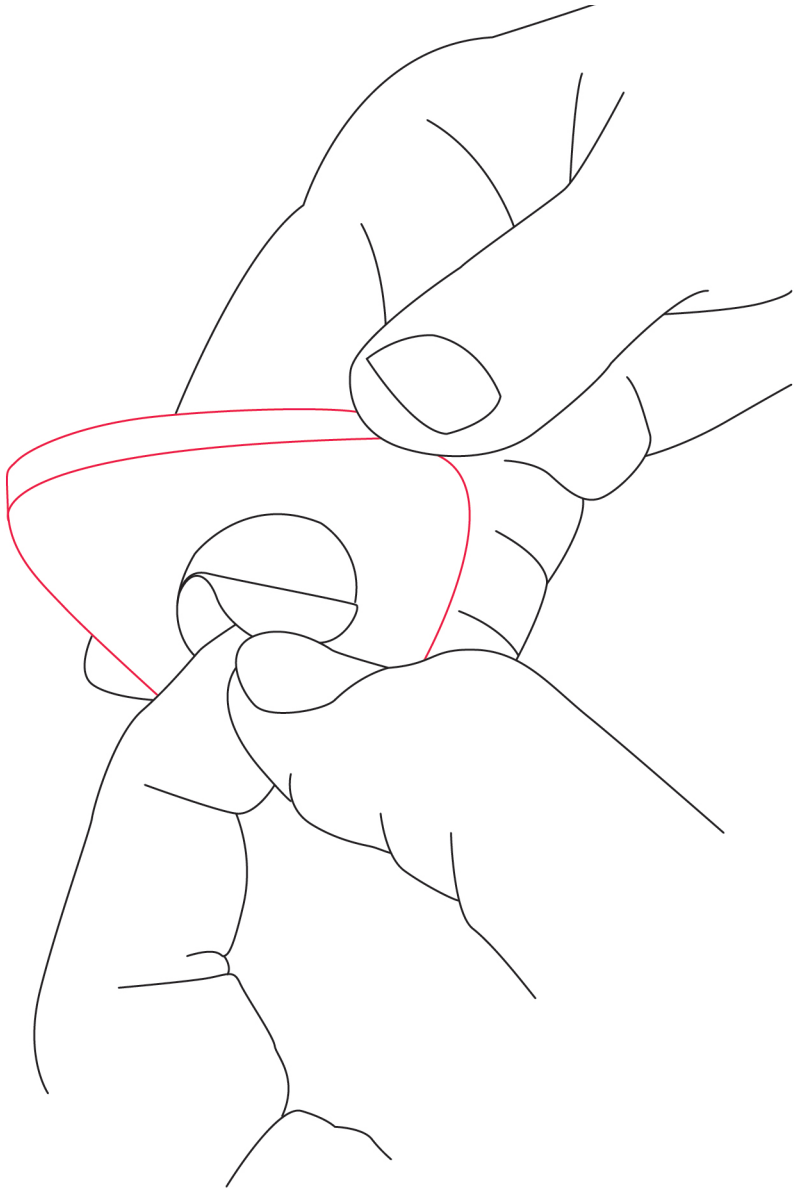
Stick the pickup on a selected area of your instrument’s soundboard.



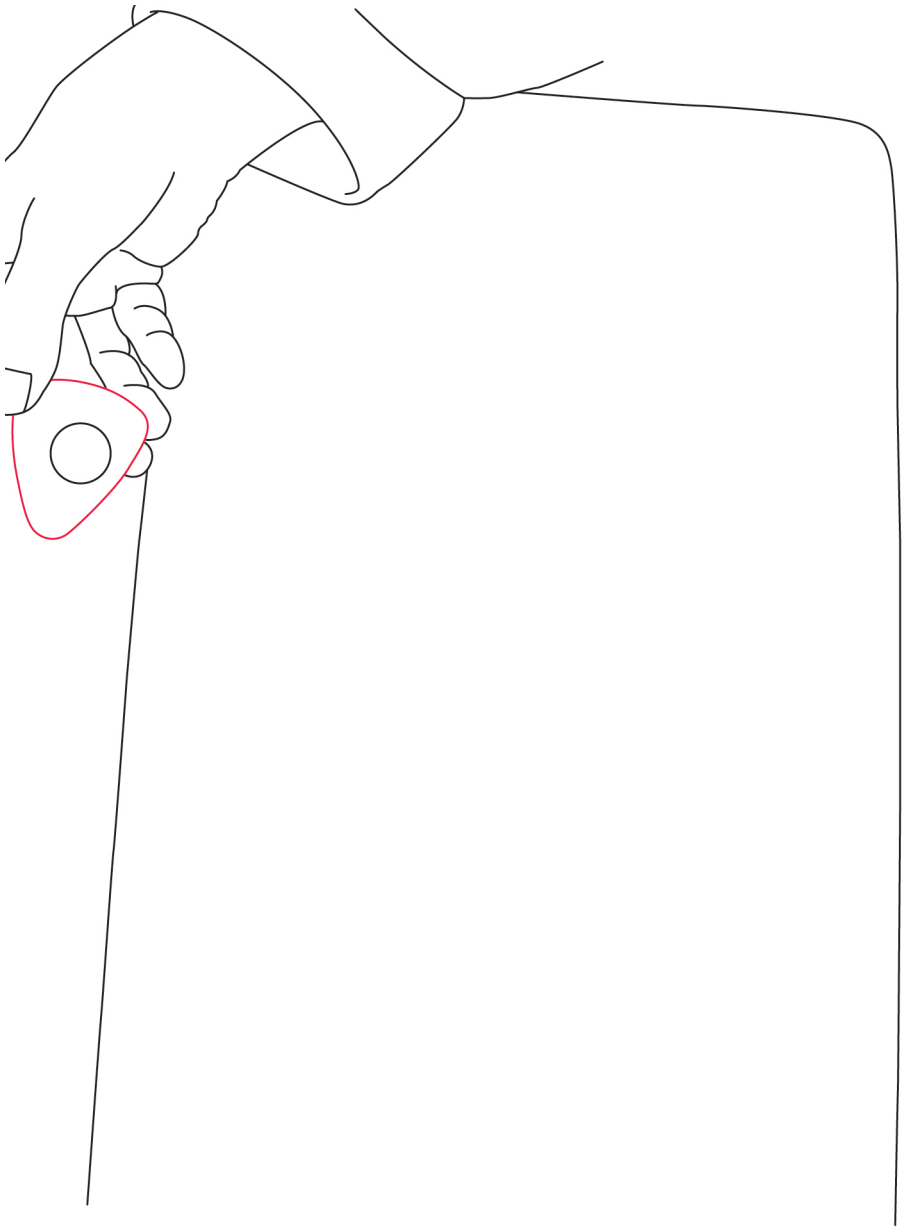
With your volume off, plug the cable with the 1/8” connector into your pickup and with the ¼” connector into your favorite high-impedance amplifier. Hold the pickup tightly when attaching and detaching the cable.



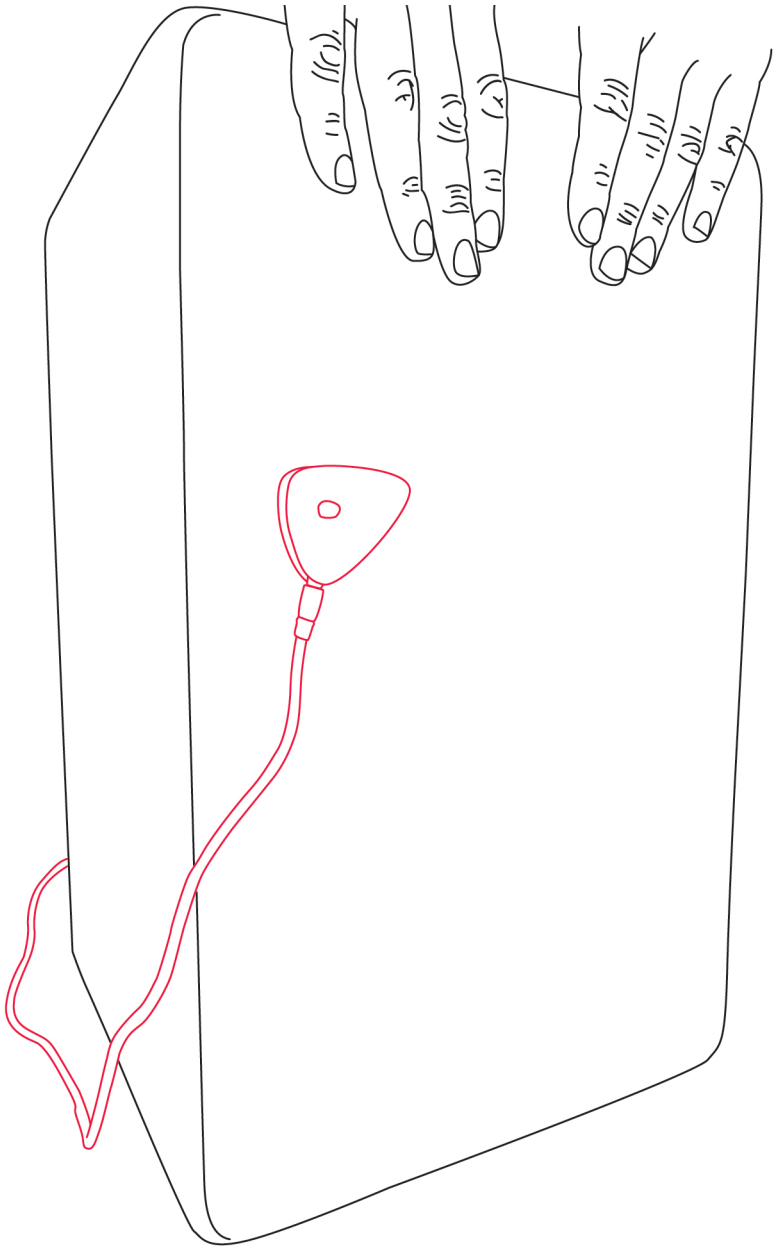
After choosing the sweetest spot for the sound you like on your instrument, remove the pickup and peel off the Power Tack adhesive.



Peel the protective layer from one side of the self-adhesive dot and fix it in the middle of the underside of the pickup.



Press the pickup firmly to the desired location. Repeat the process from step 3.



Enjoy your new pickup and Make music!
